TAURUS TAU-TH-01-BL By Hyfire Taurus Heat Detector Black

GENERAL DESCRIPTION

The **TAU-TH-01-BL**Taurus series detector samples the environmental temperature in the protected area; when the environmental temperature level or variation rate exceeds a certain degree, a fire alarm message is sent to the control panel. **TAU-TH-01-BL** is battery powered and doesn't need any system cabling installation.

LOCATION SELECTION

Select a location for the detector that conforms to your local applicable safety standards and that is in a good position for sending / receiving wireless signals to / from the father TAU-TRM-01, TAU-CEM-01 or TAU-EXM-01 network device.

Mount the detector as far as possible from metal objects, metal doors, metal window openings, etc. as well as cable conductors, cables (especially from computers), otherwise the operating distance may greatly drop.

The TAU-TH-01-BL must NOT be installed near electronic devices and computer equipment that can interfere with its wireless communication quality.

It is advisable to use the TAU-STK-01 survey kit to locate a good wireless installation location.

BATTERY COVER

Detach the battery cover by pulling and lifting the closing latch. To reinstall the battery cover, insert its two hooks into their corresponding detector's recesses; then block it by pressing down the opposite side, until you hear the click of the closing latch.

INSTALLING / REMOVING THE DETECTOR

Rotate the detector clockwise on its adaptor base to install it. Rotate the detector anti-clockwise from its adaptor base to remove it.

IDENTIFYING THE DETECTOR

The detector can be visually identified by the detachable tag imprinted with the adaptor base.

- 1) Detach the tag from the base.
- 2) Write / label the relevant identification information on the tag.
- 3) Insert the tag into its lodgement on the side of the adaptor base.

FIXING THE ADAPTOR BASE

Fix the base to the wall with suitable screws.

INSTALLING THE SAFETY SCREW

Always install the safety blocking screw.

LED INDICATORS STATUS MESSAGES

The two LED indicators communicate to the final user the status of the TAU-TH-01.

Device status	LEDs indication
Power up (DIP on "ON")	Blinks red 4 times
Power up (DIP opposite "ON")	Blinks green 4 times
Entering wake-up mode	Blinks alternatively green / red 4 times
Link success (one-by-one)	Blinks green 4 times, then the same pattern again
Link failure (one-by-one)	Enters wake-up mode and signals "Entering wake-up mode" following this failure
Link success (wake-up)	Blinks green 4 times, then same pattern again
Link failure (wake-up)	Blinks green 4 times, then blinks red on once, then blinks alternatively green / red 4 times
Normal condition	LED off (can be programmed so as to blink green every wireless communication)
Alarm activation	Blinks red every 2 seconds
Battery fault	LED off (can be programmed so as to blink amber every 5 seconds)
Tamper fault	LED off
Replaced	Blinks amber 2 times
Test mode active	Blinks green

POWERING UP AND LINKING - PRELIMINARY NOTES

Table 1

TAU-TH-01-BLneeds to be powered up with the supplied batteries.

Linking is the operation through which TAU-TH-01-BL is "wirelessly connected" to a TAU-TRM-01, TAU-CEM-01 or TAU-EXM-01 Taurus network device.

LINKING - WAKE-UP - WITH INSULATING TAB

"Wake-up" linking consists in associating one or more child devices to the Taurus system altogether in a single operation. Wake-up is performed either through the TauREX software or the TAU-TRM-01 / TAU-CEM-01 keyboard-screen interface; it CANNOT be

Wake-up is performed either through the TauREX software or the TAU-TRM-01 / TAU-CEM-01 keyboard-screen interface; it CANNOT be done through TAU-EXM-01 devices.

1) Create the "virtual model" of the TAU-TH-01-BLeither on TauREX or on the TAU-TRM-01 / TAU-CEM-01.

2) Pull out the insulating tab.

3) Trigger the wake-up procedure either from TauREX or from the TAU-TRM-01 / TAU-CEM-01.

4) Wait the end of the "wake-up" linking procedure.

5) Check on TauREX or from TAU-TRM-01 / TAU-CEM-01 for linking success. Consult their user manual.

LINKING - ONE-BY-ONE - WITH INSULATING TAB

"One-by-one" linking consists in associating one child device at a time to the Taurus system.

This operation is performed either through the TauREX software or the TAU-TRM-01 / TAU-CEM-01 keyboard-screen interface; it CANNOT be done through TAU-EXM-01 devices.

1) Create the "virtual model" of the TAU-TH-01-BL either on TauREX or on the TAU-TRM-01 / TAU-CEM-01.

2) Trigger the linking procedure either from TauREX or from the TAU-TRM-01 / TAU-CEM-01.

3) Pull out the insulating tab.

4) Wait the end of the "one-by-one" linking procedure.

5) Check on TauREX or from TAU-TRM-01 / TAU-CEM-01 for linking success. Consult their user manual

When extracting the insulating tab, keep both batteries into their lodgements with your thumb, since they can be accidentally pulled out too.

Always install the battery cover, since it is a vital part of the tamper detection feature. Make sure the battery cover is safely fixed, blocked and closed. Make sure that the internal tamper spring fits completely into its battery cover's lodgement. Check, more than once, that the cover's external tamper switch clicks when pressed.

marks on the detector and on the base.

Check the alignment of the raised reference

Please mind that LED signalling burns out battery power, therefore reducing batteries lifespan.

Always install the safety blocking screw.

POWERING UP - FIRST TIME USE - WITHOUT INSULATING TAB

Use this procedure the first time you power up a **TAU-TH-01**; the detector has not been supplied with the insulating tab. 1) Make sure the Link / program switch is set on "ON".

Insert the two supplied batteries into their device's lodgments.

POWERING UP - DEVICE LINKED TO THE SYSTEM

Use this procedure when a TAU-TH-01-BLis successfully linked to its Taurus system and you have to extract one or both batteries (e.g. batteries substitution).

1) Reinsert the battery or both batteries into their lodgments.

If performing a batteries substitution, use two brand new batteries and substitute both of them.

Do not touch the Link / program switch.

POWERING UP - RECOVERY

Use this procedure when you fail to link successfully a TAU-TH-01-BLor you want to link it again.

- 1) Move alternatively the Link / program switch 5 times.
- 2) Set the Link / program switch on "ON".
- 3) Insert the two supplied batteries into their device's lodgments.

LINKING - WAKE-UP - WITHOUT INSULATING TAB

Always ensure that the batteries are installed properly, with their polarities matching the indications on the device.

"Wake-up" linking consists in associating one or more child devices to the Taurus system altogether in a single operation. Wake-up is performed either through the TauREX software or the TAU-TRM-01 / TAU-CEM-01 keyboard-screen interface; it CANNOT be done through TAU-EXM-01 devices.

1) Create the "virtual model" of the TAU-TH-01-BLeither on TauREX or on the TAU-TRM-01 / TAU-CEM-01.

- 2) Power-up the detector (either "first time use" or "recovery").
- 3) Set the Link / program switch OPPOSITE to "ON".

4) Trigger the wake-up procedure either from TauREX or from the TAU-TRM-01 / TAU-CEM-01.

- 5) Wait the end of the "wake-up" linking procedure.
- 6) Check on TauREX or from TAU-TRM-01 / TAU-CEM-01 for linking success. Consult their user manual.

LINKING - ONE-BY-ONE - WITHOUT INSULATING TAB

"One-by-one" linking consists in associating one child device at a time to the Taurus system.

- This operation is performed either through the TauREX software or the TAU-TRM-01 / TAU-CEM-01 keyboard-screen interface; it CANNOT be done through TAU-EXM-01 devices.
- 1) Create the "virtual model" of the child device either on TauREX or on the TAU-TRM-01 / TAU-CEM-01.
- 2) Trigger the linking procedure either from TauREX or from the TAU-TRM-01 / TAU-CEM-01.
- 3) Power-up the child device (either "first time use" or "recovery").
- Set the child device's Link / program switch OPPOSITE to "ON".
- 5) Wait the end of the "one-by-one" linking procedure.
- Check on TauREX or from TAU-TRM-01 / TAU-CEM-01 for linking success. Consult their user manual.

TESTING

Magnet test

- 1) Activate test mode.
- 2) Apply again the magnet in correspondence of the "magnet test activation area".
- 3) LED indicators signal "Alarm activation".

Heat test

- 1) Activate test mode.
- 2) Apply the heat test device to the detector.
- 3) Wait a few seconds.
- 4) LED indicators signal "Alarm activation".

BATTERY FAULTS AND BATTERY SUBSTITUTION PROCEDURE

When one or both batteries are low in charge, a specific fault message is routed to the control panel. If such event occurs:

- 1) Remove the safety screw.
- 2) Remove the detector from its base.
- 3) Remove the batteries cover.
- 4) Extract both batteries.
- 5) Insert both new batteries into their holders, oriented as per polarity marks. See **POWERING UP - DEVICE LINKED TO THE SYSTEM**.
- 6) Reinstall the batteries cover.
- 7) Reinstall the detector.
- 8) Reinstall the safety screw.

Local safety standards may require you to test these devices on a regular basis.

Use only suitable heat test devices supplied by approved manufacturers. Follow their specific use instructions.

When a low battery condition is indicated, both batteries must be changed altogether.

Batteries must be brand new.

Do not touch the Link / program switch.

Ensure that the batteries are installed properly, with their polarities matching the indications on the device.

MAINTENANCE - CLEANING

- 1) Remove the safety screw.
- 2) Remove the detector from its base
- 3) Thermistor area: use a small, soft bristle brush to dislodge any obvious contaminants such as insects, spider webs, hairs, etc.
- Thermistor area: use a small vacuum tube or dry, clean, compressed air to suck up or blow any remaining small particles away. 4)
- 5) Wipe the exterior housing of the detector with a clean, damp, lint-free cloth to remove any surface film that can later attract airborne contaminants.
- Install the detector onto its base again.
- 7) Test the detector.
- 8) Reinstall the safety screw.

TECHNICAL SPECIFICATIONS

Specification	Value
Communication range with TAU-TRM-01, TAU-CEM-01 or TAU-EXM-01 network devices	200 m (in open space)
Wireless frequency band	868 MHz
Number of wireless channels	66
Radiated power	14 dBm (25 mW)
Temperature alarm threshold (A1R rate of rise setting) **	58 °C
Temperature alarm threshold (BS high temperature setting) **	78 °C
Operating temperature range	-10 °C to 55 °C
Maximum humidity (non condensing)	95% RH
IP rating	40
	Table 2

See TDS-TWDTX technical specification document for further technical data.

Detector's rate of rise (A1R) / high temperature (BS) modes can be set through TauREX.

BATTERIES SPECIFICATIONS

Specification	Value
Batteries type	CR123A (3 V, 1.25 Ah)
Batteries lifespan *	10 years
Low battery threshold value (nominal)	2.850 V
* Battaries lifesnan depends by environmental conditions, default monitor settings and link quality	

Batteries lifespan depends by environmental conditions, default monitor settings and link quality.

WARNINGS AND LIMITATIONS

Our devices use high quality electronic components and plastic materials that are highly resistant to environmental deterioration. However, after 10 years of continuous operation, it is advisable to replace the devices in order to minimize the risk of reduced performance caused by external factors. Ensure that this device is only used with compatible control panels. Detection systems must be checked, serviced and maintained on a regular basis to confirm correct operation. Smoke detectors may respond differently to various kinds of smoke particles, thus application advice should be sought for special risks. Detectors cannot respond correctly if barriers exist between them and the fire location and may be affected by special environmental conditions. Refer to and follow national codes of practice and other internationally recognized fire engineering standards. Appropriate risk assessment should be carried out initially to determine correct design criteria and updated periodically.

Use only in Taurus fire detection and alarm systems.

WARRANTY

All devices are supplied with the benefit of a limited 5 years warranty relating to faulty materials or manufacturing defects, effective from the production date indicated on each product. This warranty is invalidated by mechanical or electrical damage caused in the field by incorrect handling or usage. Product must be returned via your authorized supplier for repair or replacement together with full information on any problem identified. Full details on our warranty and product's returns policy can be obtained upon request.
