

CERTIFICATE OF CONSTANCY OF PERFORMANCE

Issued by DBI Certification-UK, approved body No. 8504.

In compliance with UK STATUTORY INSTRUMENT 2020 No. 1359 Construction Products Regulation 2011 (retained EU law EUR 305/2011) as amended by the Construction Products (Amendment etc.) (EU Exit) Regulations 2019 and the Construction Products (Amendment etc.) (EU Exit) Regulations 2020, this certificate applies to the construction product

TAU-MC-01, TAU-MC-01-BL

The product fulfils the essential characteristic:

See Annex 1

Intended use: Applications related to automatic fire alarm systems

Placed on the market under the name or trade mark of:

Hyfire Wireless Fire Solutions Ltd Unit B12a Holly Farm Business Park Honiley, Warwickshire, CV81NP United Kingdom

and produced in the manufacturing plant:

UKCPA10005

This attests that all provisions concerning the performance described in Annex ZA of the standard(s)

EN 54-5:2017+A1:2018 : Fire detection and fire alarm systems — Part 5: Heat detectors — Point heat

detectors

EN 54-7:2018 : Fire detection and fire alarm systems — Part 7: Smoke detectors — Point smoke

detectors that operate using scattered light, transmitted light or ionization

EN 54-25:2008+AC:2012 : Fire detection and fire alarm systems — Part 25: Components using radio links

under system 1 for the performance set out in this certificate are applied and that the factory production control conducted by the manufacturer is assessed to ensure the

CONSTANCY OF PERFORMANCE OF THE CONSTRUCTION PRODUCT.

This certificate was first issued on 2022-08-10 and will remain valid as long as neither the harmonised standard, the construction product, the AVCP methods nor the manufacturing conditions in the plant are modified significantly, unless suspended or withdrawn by the notified product certification body.

The attached annexes form part of this certificate.

Date of issue: 2022-08-10.

Merete Poulsen Responsible for evaluation

Steen Nilsson

Responsible for certification decision

Annex 1

EXTENT

Product description:

TAU-MC-01 Heat and Smoke Detector using Radio Links

TAU-MC-01-BL Heat and Smoke Detector using Radio Links

Configuration:

The heat and smoke detector model TAU-MC-01 consists of a plastic enclosure (dimensions: 110 (d) x 65 (h) mm) with IP40 degree of protection, containing:

- No. 1 Main board (PCB code B40-LB100-0004)
- No. 2 Battery allocable (CR123A Lithium, 3 V 1.25Ah)

The heat and smoke detector model TAU-MC-01-BL is identical to the model TAU-MC-01 but with black enclosure.

Technical Characteristics:

Operating frequency band: 868 MHz; 916 MHz

Hardware identification of the microcontroller (U4) used on the main board: STMicroelectronics STM32L051R8 Firmware identification of the microcontroller (U4) used on the main board:

- 0 1 17 (U4), using the 868 MHz frequency band
- 0_1_18 (U4), using the 916 MHz frequency band

Heat Response Catergory:

| | | distance of 6 m directly below the point heat |
|------------------------------------|-------|--|
| | | detector, in an ambient light intensity up to 500 lx. |
| Connection of ancillary devices | 4.2.3 | Open or short circuit failures of connection to |
| | | ancillary device do not prevent the correct |
| | | operation of the detector |
| | | |
| Monitoring of detachable point | 4.2.4 | A fault condition is signaled when the detector is |
| heat detectors | | removed from the mounting base. |
| Manufacturer's adjustments | 4.2.5 | It is not possible to change the maufacture's settings |
| Waltaractarer 5 aajastillelits | 112.5 | expept by special means (e.g. a special code or tool, |
| | | or by breaking or remove a seal). |
| Onsite adjustments of response | 4.2.6 | N/A |
| behavior | 4.2.0 | Ny/X |
| Software controlled detectors | 4.2.7 | The software documentation and the software |
| (when provided) | 4.2.7 | design complies supplied by the manufacturer with |
| (when provided) | | the requirements of this standard. |
| Nominal activation | | the requirements of this standard. |
| | | |
| conditions/Sensitivity: | 4.2.4 | T |
| Directional dependence | 4.3.1 | The response time of the point dectetor do not |
| | | unduly depend on the direction of airflow around |
| 2 | | the point heat detector. |
| Static response temperature | 4.3.2 | The response temperatures of the point heat |
| | | detectors lie between the minimum and maximum |
| | | static response temperatures, according to the |
| | | category of the point heat detector in Table 1 |
| | | above. |
| Response times from typical | 4.3.3 | The response times of the point heat detector lie |
| application temperature | | between the lower and upper response time limits |
| | | for the appropriate point heat detector category |
| | | in Table 2 above. |
| | | |
| Response times from 25 °C | 4.3.4 | The response time at 3 K min ⁻¹ exceeds 7 min 13 s |
| | | and the response time at 20 K min ⁻¹ exceeds 1 min 0 |
| | | S. |
| | | |
| Response times from high | 4.3.5 | No alarm or fault signal was given at high ambient |
| ambient temperature | | temperatures appropriate to the anticipated service |
| | | temepratures. |
| | | A1R |
| | | 3 K min ⁻¹ , Lower limit, 1 min 20 s and upper limit 13 |
| | | m 40 s. |
| | | 20 K min ⁻¹ , Lower limit, 12 s and upper limit 2 m 20 |
| | | S. |
| Reproducibility | 4.3.6 | The response times of the point heat detectors lie |
| , | | between the lower ad upper response time limits |
| | | specified in Table 2 above. |
| Response delay (response | | Spanner III Take E doorer |
| time): | | |
| Additional test for suffix S point | 4.4.1 | N/A |
| heat detectors | 4.4.1 | IN/A |
| | | 6.67. 8.4 |
| Additional test for suffix R point | 4.4.2 | Suffix R, the point heat detector maintains the |
| heat detectors | | response requirements of its category, in table 2 |
| | | above, for high rates of rise of temperature from |
| | | an initial temperature below the typical |
| | | application temperature applicable to the |
| | | category marked on it. |
| | | |
| | | Point heat detector Initial conditioning |
| | | category temperature °C |

| | 4.3.6 |

| Essential characteristics | Clauses in EN 54-7:2018 | Regulatory classes | Performance |
|--|----------------------------|--------------------|--|
| Operational reliability: | | | |
| Individual alarm indication | 4.2.1 | | The visual indicator(s) are visible from a distance of 6 m in an ambient light intensity up to 500 lx. |
| Connection of ancillary devices | 4.2.2 | | Open or short circuit failures of connection to ancillary device did not prevent the correct operation of the detector |
| Monitoring of detachable detectors | 4.2.3 | | A fault condition is signaled when the detector is removed from the mounting base. |
| Manufacturer's adjustments | 4.2.4 | | It is not possible to adjust the detector settings without the use of a special tool to access into the detector or use of a code to enabling entry into the panel programming software. |
| On site adjustment of response behavior | 4.2.5 | None | The mode(s) of operation are adjustable from the Control and Indicating Equipment by use of a loop communication protocol. Access to enable mode changes is by software control of the |
| | 4 | | protocol communication. |
| Protection against the ingress of foreign bodies | 4.2.6 | | The chamber is designed so that a sphere of diameter (1,3±0,05) mm cannot pass into the sensor chamber. |
| Response to slowly developing fires | 4.2.7 | | The provision of "drift compensation" (e.g. to compensate for sensor drift due to the build-up of dirt in the detector), does not lead to a significant reduction in the detectors sensitivity to slowly developing fires. |
| Software controlled detectors (when provided) | 4.2.8 | | The software documentation and the software design complies with the requirements of EN 54-7:2018. |
| Nominal activation conditions/sensitivity: | 4.2.4 | _ | Datio of roomana value |
| Repeatability | 4.3.1 | Threshold | Ratio of response values $m_{\text{max}}:m_{\text{min}} \leq 1.6$ Lower response value, $m_{\text{max}}:m_{\text{min}} \geq 0.05 \text{ dB m}^{-1}$ |
| Directional dependence | 4.3.2 | | Ratio of response values $m_{\text{max}}:m_{\text{min}} \leq 1.6$ Lower response value, $m_{\text{max}}:m_{\text{min}} > 0.05 \text{ dB m}^{-1}$ |
